*When the PTT is performed for monitoring or regulation of unfractionated heparin, V58.83 (*encounter for therapeutic monitoring*) must be coded as the **primary diagnosis**, and V58.61 (*Long term (current use) of anticoagulants*) must be coded as the **secondary diagnosis**. The condition requiring treatment with heparin, or the occurrence of an associated adverse event in a patient already on heparin requiring the testing (e.g., trauma, hemorrhage), must be coded as a **tertiary diagnosis**.

*If the PTT testing is performed based upon a markedly elevated PT/INR (e.g., >4.5) due to warfarin excess, then use ICD-9 diagnosis code 964.2 (*Poisoning by anticoagulants*) as the primary diagnosis and the V58.83 and the V58.61 as secondary and tertiary diagnoses.
